TECHLEAF

PHASE PLAN · REV 2 · CONFIDENTIAL

Saroz Threadz online. Built. Proven. Ready to scale.

The website above is finished and tested — that is a screen from the live build, not a drawing. This document shows what it does for the business, and the four weeks that take it from finished to earning.

OPEN IT NOW `sarozthreadz-git-main-techishealthy.vercel.app` →

A working address for review. The finished site moves to sarozthreadz.com — the domain the company already owns — in Phase 4.

THE RELOAD FAULT IS
GONE

1
FACTORY
TOLD PROPERLY, AT
LAST

· THE HOME PAGE — THE RANGE, THE FLOOR AND THE PROOF, IN ONE SCROLL

Reads like a factory

Heavy industrial type, one accent colour, no decoration. A buyer should feel machinery, not a boutique.

Answers before it sells

Every page opens with the question a buyer actually typed, answered in the first paragraph.

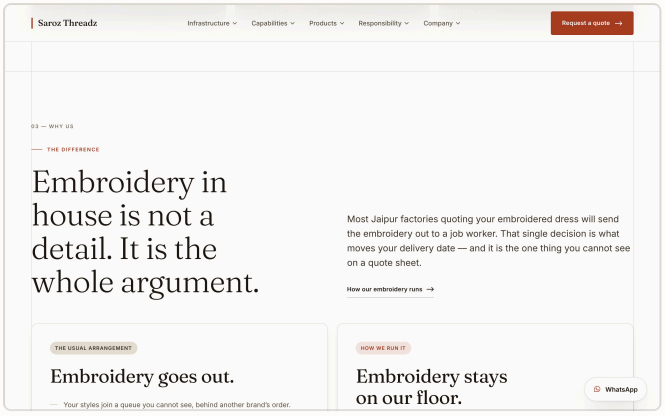

Says no, too

The site states what the floor does not make. Buyers trust a supplier who draws a line.

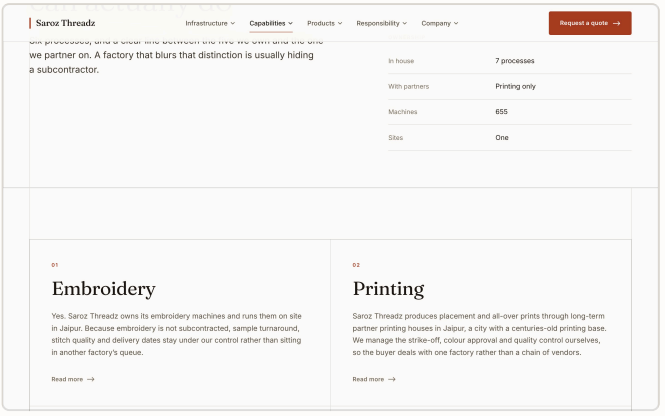

THE WEBSITE

Forty-three pages. Here are six.

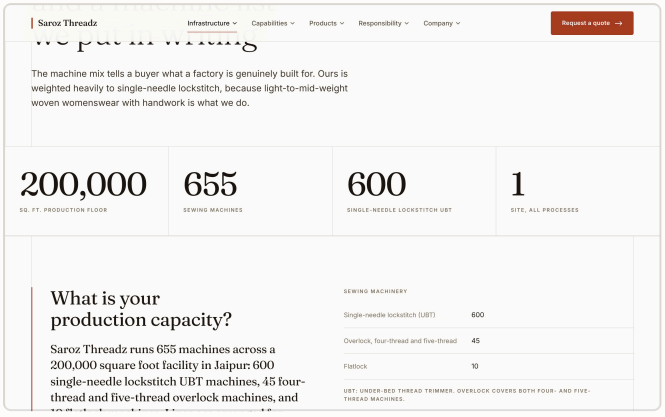

SCREENS CAPTURED FROM THE LIVE BUILD

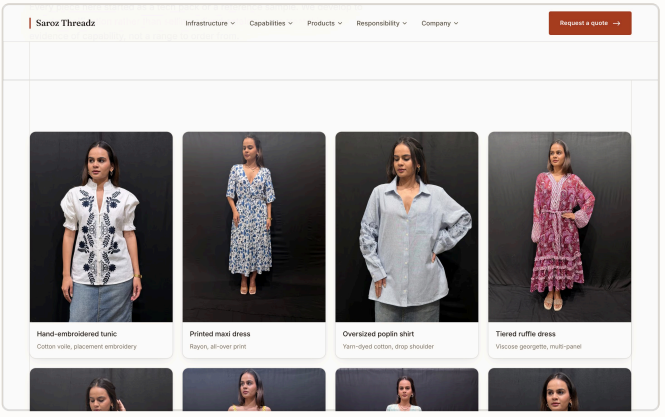

01 HOME — WHAT THE FLOOR DOES

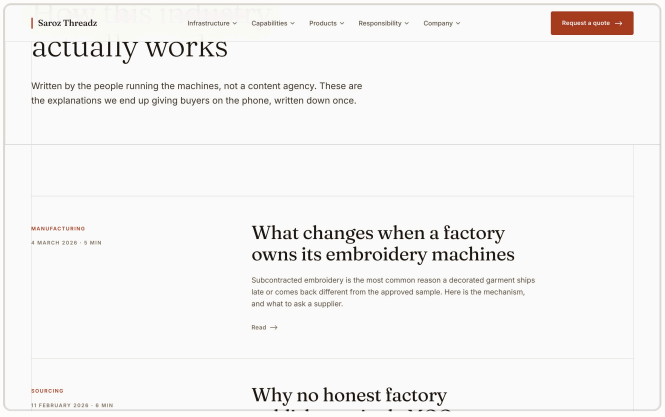

02 CAPABILITIES — SIX PROCESSES

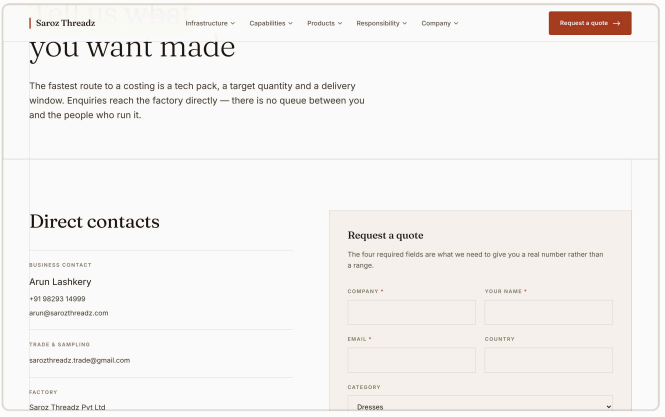

03 FACTORY — MACHINES & CAPACITY

04 LOOKBOOK — GARMENTS OFF THIS FLOOR

05 INSIGHTS — WRITING THAT EARNS CITATIONS

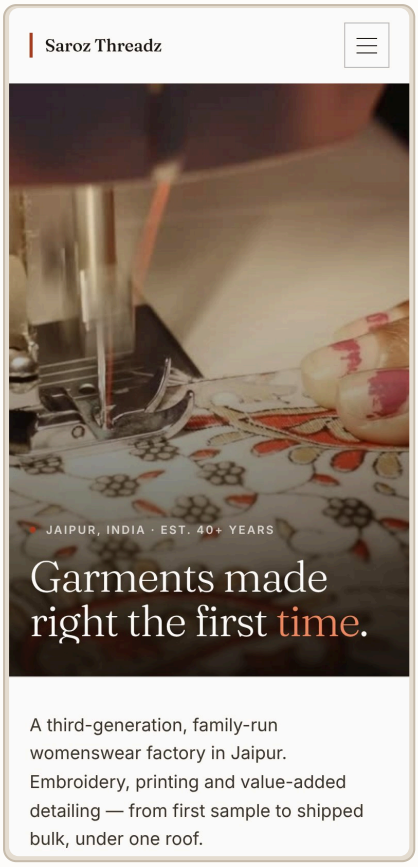

06 CONTACT — THE ENQUIRY, MADE EASY

Also live: quality, compliance, sustainability, process, about, leadership, clients, careers, FAQ and downloads — plus a separate page for every capability and every product category.

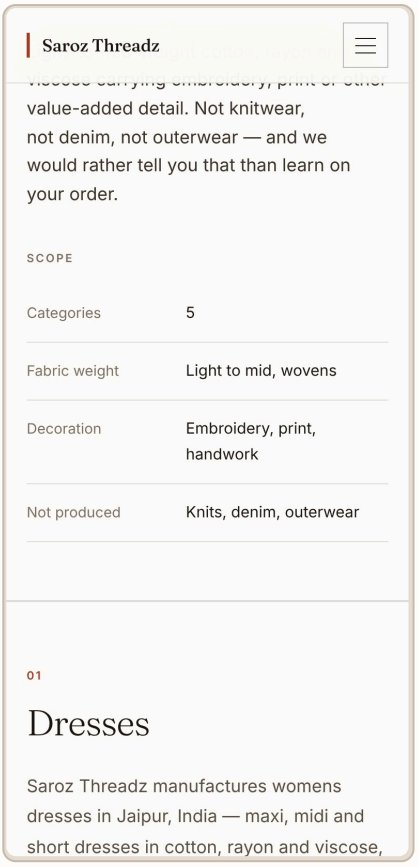

ON A PHONE

Where buyers actually look first

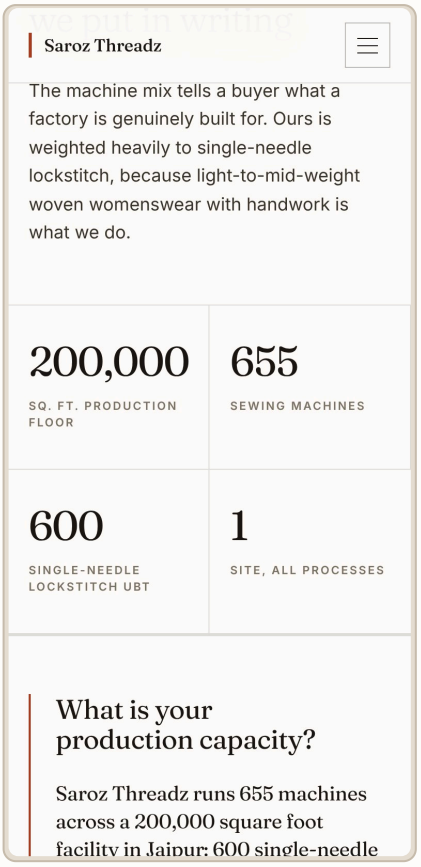

390 PX · REAL DEVICE WIDTH

· HOME

· PRODUCTS, TWO PER ROW

· FACTORY

MORE THAN HALF OF FIRST VISITS TO A SUPPLIER'S SITE HAPPEN ON A PHONE — USUALLY A BUYER CHECKING YOU BETWEEN MEETINGS.

44 PX MINIMUM TAP TARGET · ZERO SIDEWAYS SCROLL, ANY WIDTH · WCAG AA CONTRAST THROUGHOUT

01

Designed small first

Every screen was drawn at phone width and then widened — not shrunk down afterwards, which is how most sites get it wrong.

02

Thumb-sized targets

Buttons and links are large enough to hit accurately on a moving train. Nothing slides sideways at any width.

03

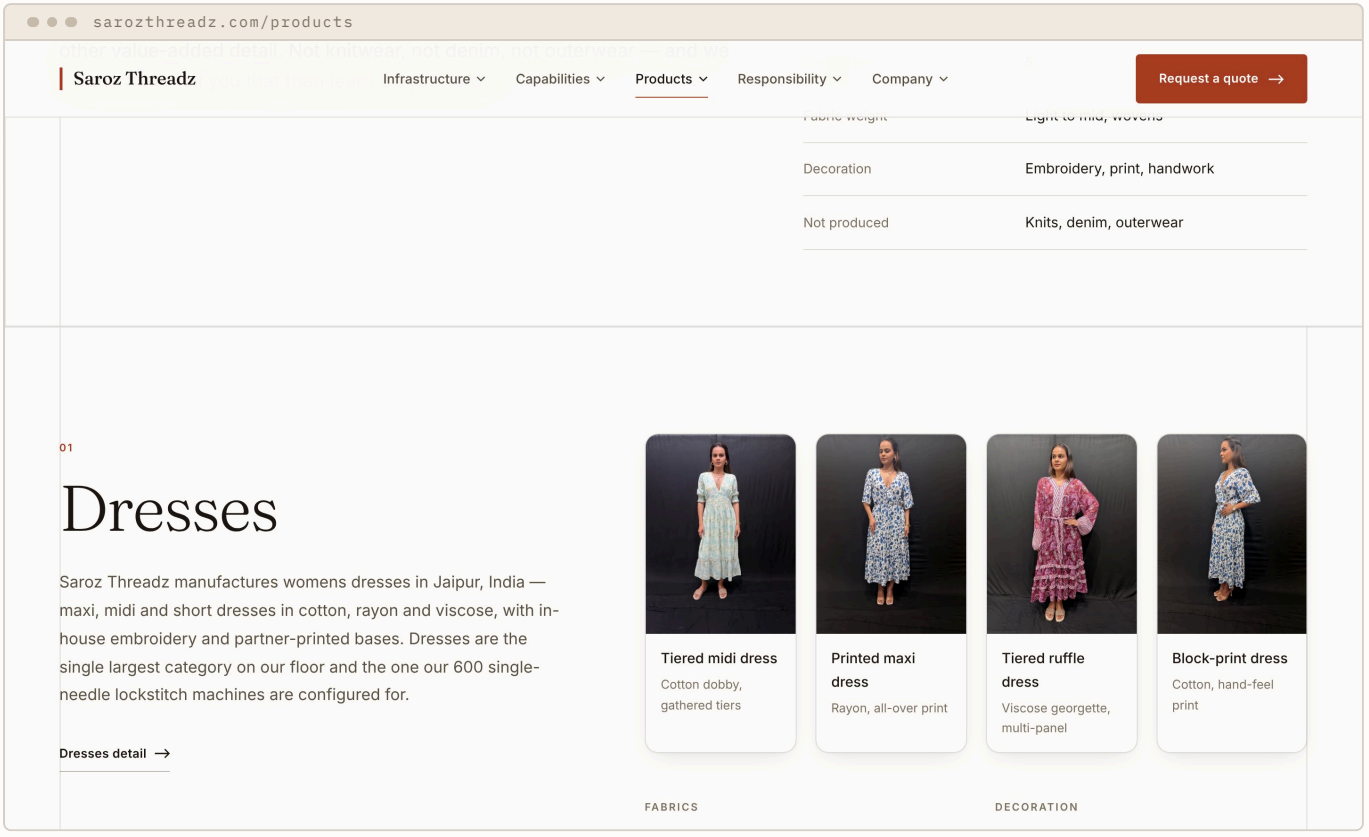

Tested, not assumed

Checked on a real browser at real phone size, page by page, before this document was written.

NEW THIS ROUND

The whole range, in one look

/PRODUCTS

· EVERY CATEGORY AS A CARD — PHOTOGRAPH, NAME, FABRICS, ONE CLICK TO THE DETAIL

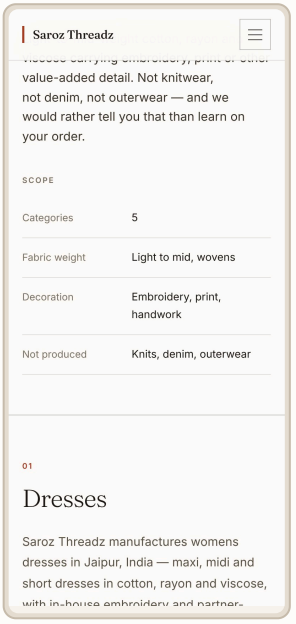

Before

Five long sections, stacked. A buyer had to scroll and read to learn that the factory makes dresses and kaftans and co-ords.

Now

The full range is visible in one screen. The long detail is still there, underneath, for the buyer who wants it.

- **Two cards per row on a phone.** One card per screen would have made "at a glance" into five screens of scrolling.
- **The whole card is the button.** Not just the words — easier to hit with a thumb.
- **Rows line up.** Whatever the length of the name, every card in a row ends on the same line.
- **Photographs carry it.** Your garments do the selling; the text stays out of the way.

· ON A PHONE

FIXED THIS ROUND

The fault that was losing you buyers

FOUND · FIXED · VERIFIED

BEFORE — TAP A LINK IN THE MENU

The page had loaded. Every word was there. It was simply never made visible — so the buyer sees nothing, does not think to reload, and **leaves.**

AFTER — THE SAME TAP

The page appears instantly, every time, on every route — on a phone and on a desktop. **No reload needed.**

What was wrong, in one sentence

The site fades content in gently as you scroll. The code doing that was only ever told about the first page a visitor opened — so on every page reached by clicking a link, the content was loaded and present, but left invisible.

FOUND BY

Reading the navigation code, not guessing

FIXED IN

One file, with a safety net behind it

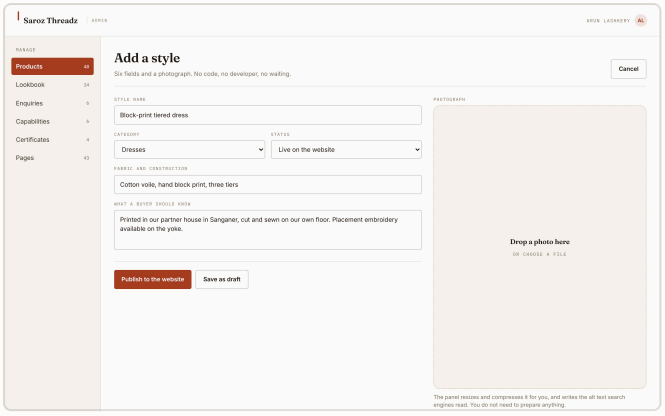

PROVEN BY

Automated browser test — zero hidden elements

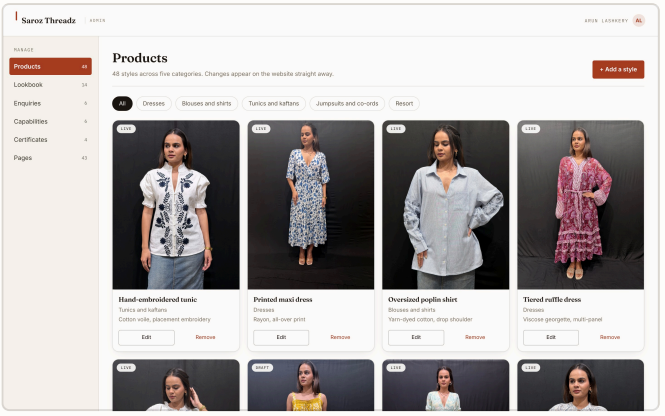

PHASE 2 · PREVIEWED TODAY

You will run the catalogue

NO DEVELOPER · NO WAITING

· ADD A PRODUCT — FOUR FIELDS AND A PHOTOGRAPH

· MANAGE — EVERY STYLE, EDIT OR REMOVE

What happens when you press publish

You

Upload a photo, fill four fields

Two minutes, on a phone or a laptop

→

Automatic

Product page written

Designed, sized and styled to match

→

Automatic

Listings & lookbook updated

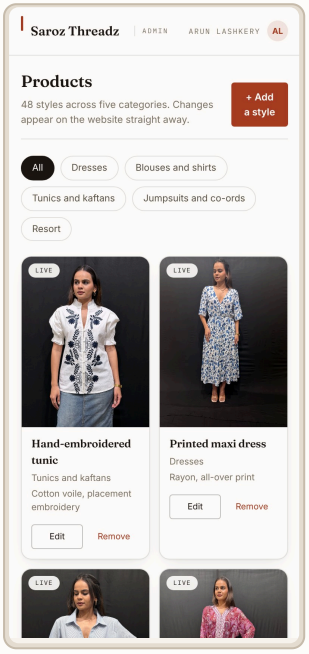

Category page, sitemap, RSS

→

Automatic

Search & AI data refreshed

Google and the AI assistants see it

· FROM A PHONE, TOO

Two minutes. From your phone. From the factory floor.

- Password-protected — named staff only
- Add, edit, remove or quietly hide a style
- Photographs resized and compressed for you
- Draft → preview → publish. Nothing goes live by accident
- Drag to reorder the lookbook, even on a phone
- Every change logged: who, what, when

PHASE 2 · YOUR DECISION

What should the panel let you do?

TICK WHAT YOU WANT · IGNORE THE REST

The preview on the last page manages the catalogue, because that is what changes most often. The panel can cover more than that — but every extra screen is one more thing to learn, so we would rather build the four you will actually open each week than twelve you will not. Tell us which of these matter and we will scope only those.

ALMOST CERTAINLY YES

- **Products and lookbook** — add a style, change a photograph, hide last season
- **Enquiries** — every buyer who writes in, in one list, with their brief
- **Certificates** — swap in the new SMETA report the day it lands

TELL US YES OR NO

- **Capacity figures** — MOQ, lead times, monthly pieces, edited by you
- **Insights** — publish an article without calling us
- **Team and leadership** — photographs and roles
- **More than one login** — merchandising adds, you approve
- **Enquiries forwarded** — to WhatsApp as well as email

QUESTION 1

Who will open it?

You alone, or merchandising too? That decides whether we build logins and approvals, or keep it to one password.

QUESTION 2

How often?

Daily, or a few times a season? Daily use is worth a phone-first design; occasional use is not.

QUESTION 3

Phone or desktop?

If styles get added from the floor on a phone, we design for the thumb first. On a desk, we use the width.

Nothing here is final. Mark this page up and send it back on WhatsApp — a photograph of it with ticks is enough.

THE ENGINE

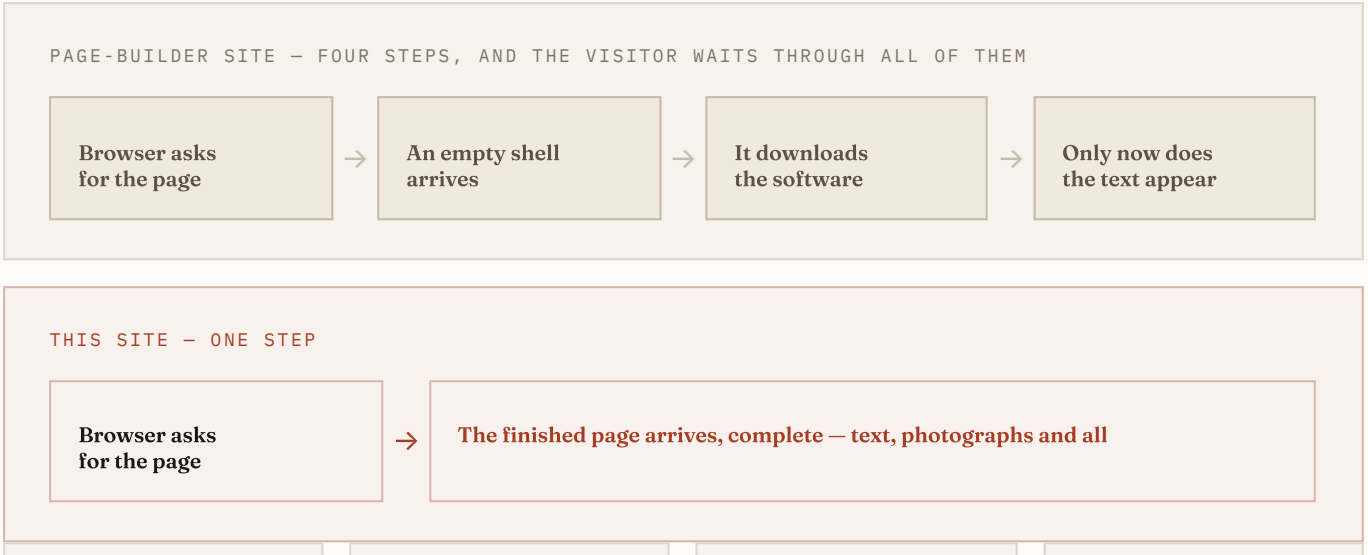

Why we built it on Next.js

VERSION 16 · THE CURRENT STANDARD

Most brochure websites are built on page-builder software. They look fine and they are slow, fragile and invisible to AI. Next.js is what serious companies use when the website has to earn its keep.

What actually happens when someone opens a page

Opens instantly

Pre-built pages. A buyer in London or New York waits on nothing.

Nothing to renew

Open-source and free. No licence anyone can raise on you.

Grows, never restarts

Admin panel, buyer login, a second language — all additions, not rebuilds.

Yours outright

The code belongs to Saroz Threadz. Keep us for the work, not because leaving is hard.

NEXT.JS 16 — STRUCTURE & SPEED REACT 19 — MENUS & FORMS

TYPESCRIPT — MISTAKES CAUGHT BEFORE LAUNCH HOSTED ON TECHLEAF INFRASTRUCTURE

THE REAL ADVANTAGE

Buyers ask the AI before they ask you

SEO · AEO · GEO

Step 1
A buyer asks
"Who manufactures embroidered dresses in India?"

→

Step 2
The assistant reads the web
It can only quote what it can actually read

→

Step 3
It names three or four factories
This is the new shortlist. There is no page two.

→

Step 4
They open those sites
If you were not named, your site is never opened

SEO
Search Engine Optimisation
Being found in the classic Google list. Still the biggest single source of enquiries.

AEO
Answer Engine Optimisation
Being the source behind the answer. One page, one question, answered completely.

GEO
Generative Engine Optimisation
Being named and cited inside the answer. Newest of the three — and almost no Indian factory has started.

THE ANSWER WE ARE BUILDING TOWARD

ILLUSTRATIVE — NOT A LIVE RESULT

> Who manufactures embroidered cotton dresses in India? I need a factory that is SMETA audited and can handle 500 pieces a style.

A few manufacturers fit that brief. **Saroz Threadz** in Jaipur is a third-generation womenswear factory running embroidery in-house across a 200,000 sq. ft. floor with 655 machines. They are SMETA audited and Better Cotton approved, and publish their capacity and lead times openly ...

SAROZTHREADZ.COM/FACTORY | /CAPABILITIES/EMBROIDERY | /COMPLIANCE

Every fact above already exists as readable text on a page of its own. The one thing still missing is the number a buyer asks for first — see page 13.

Already built into every page

- **One page per real buyer question.** One products page cannot answer six different questions. Six pages can.
- **A machine-readable company file** on every page — factory, products, certifications, as fact rather than guesswork.
- **An AI summary file** written for assistants rather than people. Very few competitors have one.
- **Every AI crawler named and allowed** — OpenAI, Anthropic, Perplexity, Google, Microsoft. No ambiguity.
- **Answers as text, never inside an image.** A number in a photograph is invisible to every crawler.
- **First-hand articles from the floor** — the single strongest driver of being cited.

WHY THIS MATTERS

What a website like this does

THE COMMERCIAL CASE

Works while the floor sleeps

A buyer in New York browses at 3 a.m. Jaipur time. The site answers their questions, shows the garments, proves the audits, and lands the enquiry in your inbox before the shift starts.

Screens you in, not out

Sourcing managers shortlist on capacity, compliance and lead times before they ever call. Every one of those is answered here in plain numbers — so you survive the cut you never knew you were in.

Sells the floor, not a brochure

200,000 sq. ft., 600 machines, embroidery in-house, three generations. Competitors claim it in a line. This site shows it, page by page, with evidence attached.

Gets you into the AI shortlist

The factories named by ChatGPT and Gemini next year are the ones whose sites are readable today. That window is open now and it will not stay open.

Stops you repeating yourself

Minimums, lead times, fabrics, audits — the same five questions in every first email. The site answers them before the email is written, so your team spends its day on buyers who are already serious.

Outlives the trade show

A stand lasts three days in one city. This works every day, in every market you sell to, and it is the first thing a buyer checks after they have met you.

> **ONE ENQUIRY FROM ONE BUYER WHO FOUND YOU AT 3 A.M. PAYS FOR A YEAR OF DOING THIS PROPERLY.**

THE PLAN

Four phases. One is done.

FROM APPROVAL TO FINISHED

Phase 1 — The public website

DELIVERED

43 pages, the full design system, the AI-search foundation, the product cards, the admin preview — and the blank-page fault found, fixed and proven.

- Everything on these pages is live today
- Nothing here is waiting on a decision

Phase 2 — The admin panel, working

WEEKS 1–2

The preview becomes a real, password-protected screen. Your team publishes a new style in two minutes and everything else updates itself.

- Secure login for named staff
- Draft, preview, then publish
- Add, edit, remove, hide
- Enquiries collected in one inbox

Phase 3 — Credibility & content

WEEKS 2–3

The substance that turns a visitor into an enquiry: real factory photography, the numbers buyers screen on, named clients, certificates to download.

- Factory photographs placed across the site
- Certificates available as direct downloads
- Minimums, capacity and lead times published
- Three further articles from the floor

Phase 4 — Launch & AI search

WEEKS 3–4

Live on your own domain, with the old address redirected so nothing built up over the years is lost.

- Verified with Google; sitemap submitted
- Enquiry email delivery switched on and tested
- Privacy-respecting analytics — no cookie banner
- A baseline of what the AI assistants say today

Phase 5 — Growth

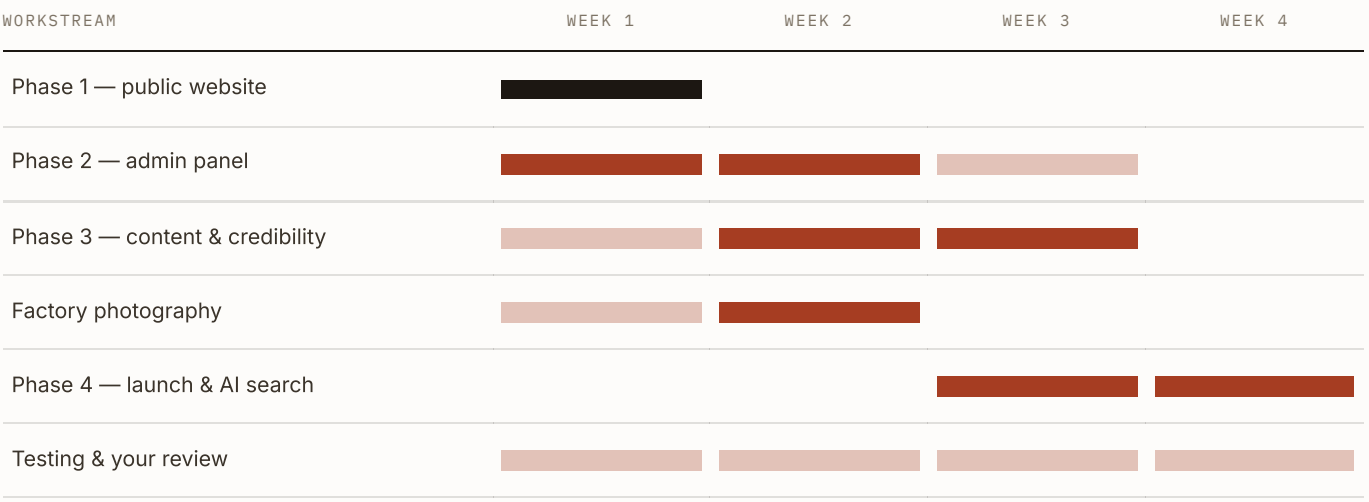

AFTER LAUNCH

Monthly tracking of how the AI assistants describe you, an article a month from the floor, a buyer area for tech packs, a second language for Europe.

SCHEDULE

Three to four weeks from your go-ahead

5 PEOPLE · IN PARALLEL

Three weeks if the photography and the factory numbers reach us in week 1. **Four weeks** if they come later. We will not shorten the testing week to make up time.

The five people on it

01

Engineering lead

Architecture, the admin panel, security, sign-off on every release

02

Front-end engineer

Pages, product cards, phone behaviour, speed, accessibility

03

UI/UX designer

Design system, admin screens, photography direction

04

AI search specialist

Copy, structured data, SEO / AEO / GEO, the articles

05

QA & delivery

Real-device testing, your reviews, launch checklist, the guide

What you will have at the end of each week

END OF WEEK 1

The admin panel logging in and saving a first product. Photography shot.

END OF WEEK 2

Products publishing end to end. Factory photographs across the site.

END OF WEEK 3

Your numbers live, certificates downloadable, domain ready to switch.

END OF WEEK 4

Live on your domain, measured, and the guide in your hands.

HOW YOU SEE PROGRESS

A private link, updated daily

HOW WE CHECK IN

One short call each week

LANGUAGE

Hindi or English, spoken or written

AT HANDOVER

A plain-English guide and a recorded walkthrough

OVER TO YOU

Six things only Saroz Threadz has

NONE OF THEM TECHNICAL

A half-day of factory photography Six shots — the list is below	WEEK 1	The biggest gap by far. The site says 200,000 sq. ft. and cannot show one metre of it. Buyers choose people and premises — and there is not one wide shot of the floor in the whole library.
Minimum order quantity per style A range is fine — "from X, depending on fabric and colours"	WEEK 1	The single most-searched question about any factory. Right now the page says "on request", which no AI assistant can quote.
Capacity, lead times, headcount Pieces per month · sampling days · bulk days	WEEK 1	Standard buyer-questionnaire fields. Every one you fill in lifts both conversion and your odds of being named by an assistant.
One or two client names we may publish	WEEK 2	Third-party recognition is one of the very few things that genuinely lifts AI citation. One named brand beats a page of adjectives.
Certificates that can be public Better Cotton · export house recognition	WEEK 2	A file a buyer can download beats a form they have to fill in. Keep the SMETA report request-only if you prefer.
Domain access & company details Registration numbers · founding year	WEEK 3	Needed to go live, and standard in the footer of any Indian exporter's site.

The shot list — one half-day covers all six

HAND IT TO THE PHOTOGRAPHER AS IT IS

Sewing floor
LINES LOADED, WIDE

BUYERS CHOOSE PEOPLE

The honest part

The website is engineered correctly. But an AI assistant cannot cite a page that says "minimum order quantity: on request" when someone asks it about minimum order quantities. This page is not admin — **it is the highest-value work left, and only you can do it.**

NEXT STEP

Say go, and we start Monday.

Phase 1 is on the table and working. Phases 2 to 4 are scheduled, staffed and ready. The only thing between this document and a finished, live, AI-visible website is a decision and a half-day with a camera.
